SUMMARY

Freelance full-stack developer focused on building scalable SaaS platforms, CRM systems, admin dashboards, REST APIs, e-commerce platforms, and business automation tools. Strong emphasis on reliable communication, clean architecture, responsive UI, secure authentication, and long-term support.

SERVICES

- SaaS development, custom web applications, admin dashboards, CRM systems, and e-commerce platforms.
- REST API development with Java, Spring Boot, authentication, database integration, and deployment support.
- Business automation, AI integrations, performance optimization, and maintainable product architecture.

FEATURED PROJECTS

MintyNex - Social Networking, Marketplace, Trading & Community Platform

- Built a modular platform foundation covering authentication, social feed, communities, messaging, marketplace listings, collection management, and staged escrow trading workflows.
- Stack: Java, Spring Boot, React.js, Next.js, Supabase, PostgreSQL, Railway, Netlify.

A King & A Queen - Premium Fashion E-Commerce Platform

- Delivered a production-ready storefront with authentication, product catalog, cart, checkout, order management, payment integration, and admin dashboard capabilities.
- Stack: React.js, JavaScript, CSS3, Java, Spring Boot, MySQL, Supabase.

TECH STACK

Frontend	React, Next.js, TypeScript, JavaScript, Tailwind CSS, responsive UI
Backend	Java, Spring Boot, REST APIs, secure authentication, clean architecture
Database	PostgreSQL, MySQL, Supabase, schema design, query optimization
Deployment	Vercel, Netlify, Railway, production checks, performance-focused delivery

WORKING STYLE

- Discovery-first approach: clarify the business problem before implementation.
- Regular updates, clear milestones, clean handoff notes, and support after launch.
- Built for maintainability so products can grow without expensive rewrites.
